case study

Global Manufacturer

Revolutionizing IT Systems

A global manufacturing company faced significant challenges with maintaining their aging SAP system. The legacy platform incurred high costs, added complexity to IT operations, and stifled innovation. The organization sought a trusted partner to archive the system efficiently, ensuring compliance and accessibility while unlocking cost savings and operational efficiency.

The Challenge

Archiving a mission-critical legacy system like SAP demanded precise execution to ensure no business disruptions. The task involved:

- Handling vast amounts of data across multiple modules.
- Ensuring all archived information met regulatory requirements.
- Minimizing downtime and risk during the transition.
- The company needed a partner with proven expertise in legacy system archiving and a track record of delivering cost-effective carve-out solutions.

The Solution

- Conducted a detailed assessment of the SAP system to identify critical data and non-essential elements.
- Deploying advanced archiving tools to extract and securely store historical data in a highly accessible and compliant format.
- Implementing a phased shutdown plan to ensure business continuity.

The Outcome

- The client reduced IT operational costs by 30% annually, freeing up resources for innovation.
- Compliance with data retention and regulatory standards was achieved, eliminating risks of penalties.
- The company gained agility by transitioning from a cumbersome legacy system to modernized IT infrastructure.
